Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Canceled)

2. (Currently amended) The method of ~~claim 1~~ claim 14, wherein the ~~capture data includes~~ received coordinates include time ordered (x,y) coordinate pairs.

3. (Currently amended) The method of ~~claim 1~~ claim 14, wherein the ~~capture data includes~~ received coordinates include vector coordinates (x,y,t).

4 - 8. (Canceled)

9. (Currently amended) ~~A method comprising~~ The method of claim 14, further comprising:

~~receiving a set of coordinates from a capture device, the set of coordinates indicating where on a paper form a set of marks was made without the use of a graphical user interface;~~

if the set of coordinates conflict, selecting the coordinates of the conflicting set that were captured last as the set of coordinates~~; and~~

~~mapping the set of coordinates to a date~~.

10. (Original) The method of claim 9, wherein the set of coordinates further indicates when the set of marks was made.

11. (Currently amended) The method of claim 9,

wherein the paper ~~data~~ form is attached to the capture device, the ~~data~~ form including a plurality of boxes, a first group of the boxes being associated with 12 months in a year, a second

group of the boxes being associated with 31 days in a month, and a third group of the boxes being associated with a current span of years,

wherein each box in the first group corresponds to one of the months, each box in the second group corresponds to one of the days, and each box in the third group corresponds to one of the years.

12. (Original) The method of claim 11, wherein the set of marks is made by checking one box from each of the first, second, and third groups.

13. (Original) The method of claim 12, further comprising:

resolving the checking of multiple boxes within one of the first, second, or third groups, including

receiving multiple sets of coordinates corresponding to the multiple boxes, and

determining which of the multiple sets of coordinates was captured by the capture device last.

14. (Previously presented) A method comprising:

receiving a set of coordinates from a capture device, the set of coordinates indicating where on a paper form a set of marks was made without the use of a graphical user interface; and

mapping the set of coordinates to a date,

wherein the mapping includes:

retrieving from memory predefined coordinates indicating where each set of marks corresponding to a date is expected to be made on the capture device;

comparing the set of coordinates to the predefined coordinates;

determining which of the predefined coordinates is the closest match to the set of coordinates; and

storing the date corresponding to the determined predefined coordinates.

15. (Currently amended) The method of claim 14, further including:

receiving an identification of ~~a paper data form~~ the paper form; and

retrieving from memory the predefined coordinates based on the identification.

16. (Currently amended) The method of claim 9,

wherein the paper ~~data~~ form is attached to the capture device, the ~~data~~ paper form including a calendar displaying the days in a month.

17. (Currently amended) A system, comprising:

a memory;

a processor in communication with the memory, the processor executing a set of instructions to:

~~receive capture data corresponding to a set of marks made on a paper data form attached to a capture device,~~

~~if portions of the capture data conflict, selecting the portion of the conflicting capture data that was captured last as the capture data, and~~

~~map the capture data to a date~~

receive a set of coordinates from a capture device, the set of coordinates indicating where on a paper form a set of marks was made without the use of a graphical user interface;

retrieve from the memory predefined coordinates indicating where each set of marks corresponding to a date is expected to be made on the capture device;

compare the set of coordinates to the predefined coordinates;

determine which of the predefined coordinates is the closest match to the set of coordinates; and

store the date corresponding to the determined predefined coordinates.

18. (Currently amended) The system of claim 17, ~~wherein the capture data indicates~~ the processor further to execute instructions to receive additional capture data that indicates when and where the set of marks were made on the paper ~~data~~ form.

19 - 20. (Canceled)
